

Learn to **measure** and **manage** GHG emissions

- **Largest technically rigorous curriculum**
- **Relied on by UNFCCC for capacity building**
- **7,000 members in over 100 countries**

Our mission is to address climate change by building and supporting a global community of experts with the highest standards of professional practice in measuring, accounting, auditing and managing greenhouse gas emissions.

Globally Recognized Certificates & Diplomas

We are **training tomorrow's professionals** how to manage carbon and to credibly measure, report, and verify (MRV) GHG emissions.

Your online courses are available **24/7** around the world.

IPCC GUIDELINES COURSE SERIES

Professional preparation for a low-carbon future | Hundreds of experts under the United Nations' **Intergovernmental Panel on Climate Change (IPCC)** have spent two decades developing the world's most rigorous and comprehensive technical methods on greenhouse gas (GHG) emissions and removal estimation. These methods are the foundation for all GHG policies and programs.

CURRICULUM

The IPCC Guidelines curriculum is available globally online and uniquely rigorous and comprehensive.

- [501 Introduction & cross-cutting Issues](#)
- [511 Energy](#)
- [521 Industrial processes & other product use](#)
- [531 Agriculture](#)
- [541 Forestry & other land uses](#)
- [551 Waste](#)

Courses contain examples and interactive exercises using real case studies. A professional Certificate is awarded after successful passage of a final exam.

The courses can be used to **improve capacity building** where it is needed most.
