

SCHOLARSHIP FUND

CONTRIBUTING TO AN EVER-IMPROVING
GHG PROFESSIONAL COMMUNITY

WHAT IS THE PURPOSE OF OUR SCHOLARSHIP FUND?

To promote inclusive representation in climate mitigation strategies and improve access to education for professionals that demonstrate ambition in being the catalyst for change.

The Greenhouse Gas Management Institute

GHGMI has a mission to train and develop the **GHG experts** needed to implement climate change actions worldwide. Our **Education Program** provides professional training in GHG accounting, auditing, and management. Our **curriculum** is developed with the utmost attention to applied technical methods and is accessible online, globally.

How can we support learners together?

Join us in our commitment to fostering opportunities for aspiring carbon management professionals from majority-world countries, and help us to support their enhanced proficiency in measuring, monitoring, reporting, and managing GHG emissions.

Increased funding will allow us to narrow this gap, moving us closer to 100% of requests received. While global economic disparity increases, as does the urgency to take climate action.

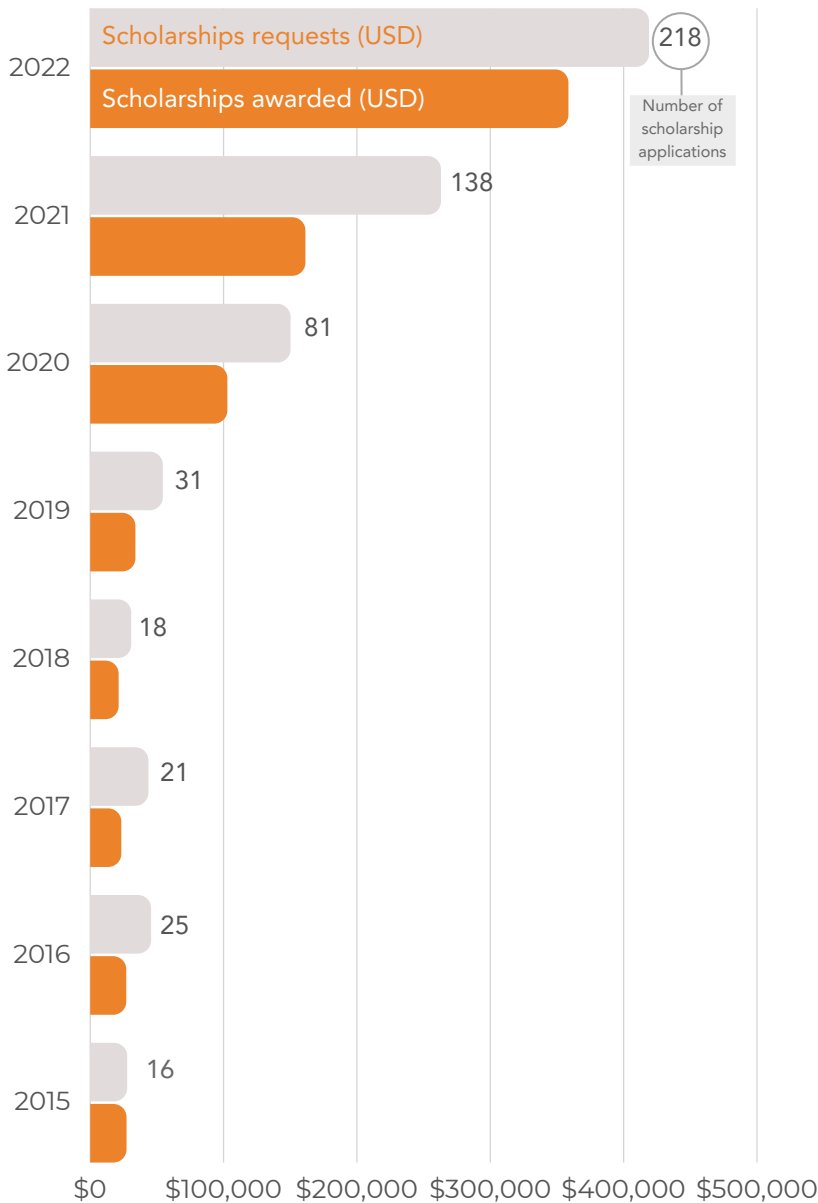

Why Collaborate?

Currently, we are unable to support full scholarships, but with your support we can build a more robust scholarship fund, where **100% of your donation will go towards learner scholarships for GHGMI training courses and programs.** Since our founding, GHGMI is working to close the accessibility gap in professional climate mitigation education. Advanced training is essential for companies and governments to take climate action.

Let's cultivate meaningful climate action by financially supporting those most vulnerable to the consequences of climate change

The recipients of GHGMI scholarships are **GHG professionals committed to fighting climate change.** Awardees are often from vulnerable countries and underrepresented groups seeking support to mitigate global economic disadvantages.

YOU CAN HELP NARROW THE ACCESSIBILITY GAP IN CLIMATE MITIGATION EDUCATION.

We have experienced a **13x** increase in scholarship applications since 2015.

The scholarship amount requested has increased by more than **800%** since 2017.

On average, we're only able to award **60%** of the requested tuition fee discount.

"Throughout Asia, the need to heighten climate change awareness, inform, disseminate information, and help companies structure quality reporting and solutions is even more pressing. The GHGMI training and certificate lends the confidence and direction to share the best standards and insights for preparing carbon footprint, reporting, and management within our network and potential clients in the Agrifood sector."
